<b>Management Effect</b>	<b>0.6</b>

Asian equities rallied in Q4 as investors grew more optimistic about potential rate cuts in 2024. The fund saw a positive absolute return, outperforming its benchmark.

## Performance

The fund finished ahead of its benchmark. It saw strong asset allocation effects from both the India overweight and China underweight. Stock selection was also strong in India and Korea.

## Market Background

Asian equities rallied in Q4 as investors grew more optimistic about potential rate cuts in 2024.

## Outlook

We are broadly positive on equity markets in 2024 – both global and Asian – primarily because inflation data continues to undershoot expectations, while growth is holding up better than feared. With inflationary pressures subsiding and labour markets remaining reasonably strong, consumers' disposable incomes should now be growing. So far this has led to a significant pickup in the savings rates of many economies. For example, in the UK over the past 30 years, the savings rate has only been higher roughly 10% of the time. However, if consumers become more confident about falling interest rates in 2024, they should begin to increase their spending. Even if end demand simply remains stable, the actual demand that many companies will see for their products should increase as we appear to be reaching the end of the inventory cycle. This is true in many areas, from sportswear to tech and consumer electronics. An end to the destocking cycle should boost industrial production, which typically coincides with strong Asian equity market performance.

The key risk to this optimistic outlook is valuations. At the aggregate index level, valuations in Asia are reasonable, but that is largely because China is cheap. The other key markets in Asia are generally trading slightly expensive or outright expensive versus their long-term averages. Crucially however, our portfolio is not tied to the index, and we still do not have a problem finding value, particularly in smid-cap stocks.

From an individual market perspective, positioning remains broadly unchanged. India is our key overweight as we expect a turn in the investment cycle, continued government investment, and increased investment from multinationals to capture India's domestic market and diversify their manufacturing bases away from China. We are also positive on Vietnam as it offers another key investment destination for companies looking to move away from China. Vietnamese FDI data remains very healthy, supporting the argument that the country will continue to outperform other Asian economies from an export perspective, which should boost GDP, earnings growth and stock market performance. Conversely, China remains the key underweight for all the reasons discussed in recent months.

Sectors relative to Index %

Portfolio Positioning

We continue to have strong conviction in a new Indian investment cycle, and see Financials as a key beneficiary of that. With this in mind, we initiated two new positions that have underperformed the sector over the past year, despite releasing good results, meaning they have derated significantly versus their own history and peers. Aavas Financiers is the leading affordable mortgage provider in India. We like the affordable housing space because it is relatively under-penetrated, which should enable a protracted period of strong growth. It also offers high yields as many borrowers are either new to credit or don't have formal incomes. Despite these high yields and strong growth, we believe that credit costs should remain low as people are extremely reluctant to default on their home.

Aditya Birla Capital is a financial conglomerate, offering housing finance, asset management and insurance services. The vast majority of the value stems from its Non-Banking Financial Company (NBFC) business. We like the fact that it has pivoted its loan book to focus on SMEs and consumers, which has led to increasing net interest margins as well as improvements in ROA and ROE. In our view the business looks extremely cheap compared to other NBFCs with a similar ROE and growth profile.

Elsewhere we bought Chroma as we see it as a strong play on both EVs and AI. We also increased the position in Fila on weakness as we expect to see a turnaround in the sportswear business in 2024 following a period of destocking.

Conversely, we sold Bank Negara as we see limited further upside. We also took some profits in 360 One and Fabrinet.

Stock Focus

Fabrinet (Thailand, I.T.)

Fabrinet is the clear industry leader in optical manufacturing services, with a 50% market share and no clear rival. It appears that the demands of AI technology are catalysing the adoption of silicon photonics in data centres. Fabrinet is poised to become a significant beneficiary of this trend. Networking bandwidth has failed to keep up with meteoric AI/GPU performance gains. This means that a significant proportion of an AI workload's time can be spent waiting for data to be moved around; networking is becoming a major bottleneck for AI. Co-packaged optics are likely to be the solution to this problem, and should therefore be a key source of future revenue for Fabrinet. In the near term, co-packaged optics are not yet being deployed, but Nvidia has started using pluggable optical connections between servers in its latest DGX system (H100), with Fabrinet currently the sole supplier. We expect that from CY23-CY28, Fabrinet could deliver a 50% CAGR in AI pluggable revenue as a result of its collaboration with Nvidia. The shares performed well due to ongoing positive earnings revisions.

### Highlights

- The fund finished ahead of its benchmark. It saw strong asset allocation effects from both the India overweight and China underweight. Stock selection was also strong in India and Korea.
- Our Indian wealth management stocks performed well as they benefit from strong markets, and there has been a lot of IPO and placement activity, which also helps from a fundraising perspective.
- Hansol Chemical rallied due to signs of a rebound in the memory market.
- Karoon Energy was the biggest detractor. It recently announced a placement to fund M&A. We believe the deal is attractive and added to our position in the placement.

### Highlights

- At the sector level, outperformance was particularly strong in Financials and Materials.
- Nuvama Wealth Management and Hansol Chemical led outperformance in Financials and Materials, respectively.
- Tencent struggled due to concerns over potential fresh curbs on the video gaming industry.

Switzerland: Prospectus, Key Investor Information Documents, Articles of Association, annual and semi-annual reports of the Fund may be obtained free of charge from the Swiss Representative (First Independent Fund Services AG, Klausstrasse 33, 8008 Zurich) and Paying Agent (NPB New Private Bank Ltd, Limmatquai 1, CH-8024 Zurich).

**Additional risks**

**FDI Risk:** FDI may fluctuate in value rapidly and leverage through FDI may cause losses that are greater than the original amount paid for the relevant FDI.

**Operational Risk:** human error, system and/process failures, inadequate procedures or control may cause losses to the Fund.

**Liquidity Risk:** the Fund may have difficulty buying or selling certain securities readily which may have a financial impact on the Fund.

**Credit/Counterparty Risk:** a party with whom the Fund contracts for securities may fail to meet its obligations (e.g. fail to pay principal or interest or to settle an FDI) or become bankrupt, which may expose the Fund to a financial loss.

For more information on these and other risk factors that apply to the Fund, see the section entitled "Risk Factors" in the Prospectus.
