Currency Effect	0.2
Management Effect	-5.0

Emerging market equities were broadly flat during Q3, although this masked a sharp rotation away from the winners of the first half of the year. The fund saw a negative absolute return, with weakness concentrated in North Asian technology.

Performance

The fund finished behind its benchmark. China, Korea and Taiwan were the main sources of underperformance, while Greece and several gold miners contributed positively.

Market Background

Emerging market equities were broadly flat during Q3, although this masked a sharp rotation away from the winners of the first half of the year.

Outlook

A pullback in the Asian technology space was increasingly likely, given the magnitude of previous gains. However, we believe it was largely due to technicals and positioning rather than a change in the underlying fundamentals. Demand across the North Asian technology hardware ecosystem remains extremely strong. On a recent research trip to Korea and China, we found no evidence of a slowdown in the underlying appetite for compute and other datacentre components. Instead, the buildout continues to encounter bottlenecks in memory, substrates, power and advanced packaging. Our portfolio remains positioned in these areas of constraint. On our estimates, the major Korean memory producers could generate cash equivalent to 70-90% of their current market capitalisation over the next three years. Greater clarity on how this capital will be returned to shareholders could provide an important catalyst during Q4.

Gold remains another key theme in the portfolio. More hawkish interest rate expectations represent a short-term headwind, and we have taken some profits accordingly. However, the structural drivers of our positive view remain intact, including developed market fiscal deterioration, concerns over currency debasement and continued central-bank buying, particularly in emerging markets. Our preference remains for miners that combine leverage to the gold price with visible production growth and free cash flow inflection points.

We went into the first round of Brazil's presidential election modestly overweight, believing that the risk/reward was favourably balanced. In the event, Flavio Bolsonaro took a commanding lead over Lula. A Bolsonaro victory in the run-off on 25th October should reduce the political risk premium in Brazil, given the possibility of tighter fiscal policy and reforms that could lift growth. Material gains in Congress for the PL party and other right/centre-right parties are also critical changes in the political landscape in Brazil that are positive for markets in the immediate term. With an improving risk/reward, we have therefore built a larger overweight, adding slightly to existing Financials and Utilities positions, and initiating a position in a car rental company. Outperformance of existing names has further increased our overweight. We also rotated some capital within Utilities, and from a long-term holding to more discounted alternatives that are more sensitive to a reduction in risk premia.

Overall, we remain constructive on the outlook for EM equities, but we have reduced portfolio risk, primarily due to rising global bond yields. Whilst higher nominal and real yields partly reflect continued strength in the US economy, they increase the cost of capital and could eventually weigh on risk appetite, particularly for longer-duration growth stocks.

Sectors relative to Index %

Portfolio Positioning

During the quarter, we re-entered HDFC Bank. The shares have fallen to around 1.7x book value, compared with a historical range of 2.5-3.5x. The bank has lost some momentum since the merger with its mortgage lender parent in 2023, but a recent CEO change could help reinvigorate the franchise. Indian credit growth remains strong at approximately 18-19%, driven partly by corporate working-capital demand, while asset quality trends appear benign. We remain underweight India overall, reflecting relatively high valuations for the growth on offer, and the economic headwind from elevated energy prices.

We also initiated a position in Vista Energy, an Argentinian energy producer with a strong production growth runway. Recent acquisitions have created the potential to increase output from approximately 150,000 barrels per day to around 250,000 over the next 3-4 years, representing 15-20% annual volume growth.

Meanwhile, we added back to Samsung Electro-Mechanics following its correction, and bought Samsung Securities, which should benefit from increased domestic market activity amid a wave of new wealth creation in Korea.

Conversely, we exited Samsung C&T. While the company continues to trade at a substantial discount to net asset value, we see fewer catalysts for that discount to close, compared to other Korean holding companies. Its dividend policy for 2026-2028 is relatively unambitious, share buybacks appear unlikely and the Samsung Biologics rights issue will absorb additional capital. We believe we can obtain cleaner exposure to the Korean memory cycle and corporate governance reforms elsewhere.

We also took profits in Zhongji Innolight. The company manufactures optical transceivers for data centres and has been a significant beneficiary of AI infrastructure investment. However, uncertainty around access to the US market and the possibility of protectionist measures favouring domestic competitors have increased.

Finally, we trimmed selected gold miners as well as our Greek and Peruvian banking exposure following strong performance, without changing our positive longer-term view.

Stocks

Below we highlight a major winner and a major loser:

Alpha Bank

Alpha Bank is one of Greece's four major banks, with a strong retail and corporate franchise and an attractive deposit base. The shares performed strongly during the quarter as investors continued to recognise the improving outlook for Greek credit growth and capital returns.

The Greek banking system's loan-to-deposit ratio is approximately 60%, compared with around 100% across the eurozone, providing scope for a multi-year period of credit expansion as the economy continues to re-lever. Alpha also benefits from a Current Account Savings Account ratio of approximately 75%, while the consolidated structure of the Greek banking market supports pricing discipline. With a common equity tier one ratio of 14-15%, the bank has meaningful excess capital that we expect to be returned to shareholders.

CATL

CATL is the world's leading producer of batteries for electric vehicles and energy storage systems. The shares de-rated during the quarter amid concerns over the longevity of energy storage demand, a potential supply response in electric vehicle batteries and the possibility of global vehicle manufacturers shifting some orders towards second-tier suppliers. As a widely owned stock, it was also vulnerable to the broader momentum unwind.

CATL retains substantial competitive advantages in technology, scale and manufacturing efficiency. Its net profit per gigawatt hour remains well ahead of the wider industry. However, overcapacity is a persistent risk in the Chinese battery market, while uncertainty around market share and unit profitability has increased. We therefore reduced the position materially during the quarter while retaining exposure to the company's longer-term growth potential.

Non Equity	0.1	0.0	0.1	0.2
Cash	0.1	0.0	0.1	0.2

Highlights

- The fund finished behind its benchmark, with underperformance concentrated in China, Korea and Taiwan.
- Our AI supply chain names came in for profit taking after strong performance, particularly SK Square, Accton and AMEC.
- Greece was a notable contributor from a country perspective as Alpha Bank appreciated on the improving outlook for Greek credit growth.

Sector Selection (%)

Sector	Sector Allocation	Security Selection	Currency Effect	Management Effect

Information Technology	-0.6	-3.2	0.0	-3.7
Non Equity	0.1	0.0	0.1	0.2
Cash	0.1	0.0	0.1	0.2

Highlights

- From a sector perspective, outperformance in Materials was outweighed by underperformance in I.T. and Financials.
- The fund's gold miners performed well as the price of gold rebounded slightly.
- I.T. was the largest detractor as AI beneficiaries gave back some of their gains.
- Financials also detracted, reflecting weakness in selected holdings and the fund's limited exposure to outperforming Chinese banks.

Important Information:

Shareholder Rights

This is a marketing communication. This document is issued by TT International Asset Management Ltd (“TT”), authorised by and regulated in the United Kingdom by the Financial Conduct Authority. This information is only directed at persons residing in jurisdictions where the Fund and its shares are authorised for distribution or where no such authorisation is required. The information herein does not constitute an offer of shares in the Fund, and it is not an offer or solicitation to any potential clients or investors, for the provision by TT of investment management, advisory or any other comparable services.

TT International Funds plc (the “Company”) is established and authorised in Ireland as an undertaking for collective investment in transferable securities pursuant to the European Communities Undertakings for Collective Investment in Transferable Securities Regulations 2011 (as amended or supplemented from time to time). The fund is a sub-fund of the Company (the “Fund”) and has been approved by the Financial Conduct Authority of the UK as an Overseas Funds Regime Recognised Scheme (“OFR”) under section 271A (Schemes authorised in approved countries) of the Financial Services and Markets Act 2000, as amended (“FSMA”) and is therefore considered to be a recognised collective investment scheme for the purpose of FSMA. The distribution of this document is restricted to sophisticated, accredited and/or professional investors as defined in the legislation of the relevant countries. In the UK, the restriction is to “professional investors” in accordance with FSMA. No shares in the Fund may be offered or sold in the United States, or to or for the benefit of U.S. Persons save for residents of the United States who are both “accredited investors” as defined in Regulation D under the US Securities Act of 1933, as amended, and “qualified purchasers” as defined in Section 2(a) (51) of the US Investment Company Act of 1940, as amended.

A prospectus and supplement for the Fund (“Prospectus”), and Key Information Documents (“KIDs”) for each share class of the Fund can be obtained from www.ttint.com and is available in other languages. The KIDs can be obtained from www.ttint.com and are available in one of the official languages of each of the EU Member States into which each sub-fund has been notified for marketing under the Directive 2009/65/EC. In addition, a summary of Fund investor rights is available from www.ttint.com.

Any person considering an investment in the Fund should consult the Fund’s Prospectus. Investment in the Fund carries with it a high degree of risk. Past performance is not necessarily indicative of future results and investors may not retrieve their original investment. Nothing in this document constitutes or should be treated as investment advice nor is it a recommendation to buy, hold or sell any investment. Performance statistics are not necessarily based on audited financial statements and assume reinvestment of portfolio distributions. Net asset value of the portfolio will fluctuate with market conditions which includes fluctuations in currency markets.

Additional Risks

FDI Risk: FDI may fluctuate in value rapidly and leverage through FDI may cause losses that are greater than the original amount paid for the relevant FDI.

Operational Risk: human error, system and/process failures, inadequate procedures or control may cause losses to the Fund.

Liquidity Risk: the Fund may have difficulty buying or selling certain securities readily which may have a financial impact on the Fund.

Credit/Counterparty Risk: a party with whom the Fund contracts for securities may fail to meet its obligations (e.g. fail to pay principal or interest or to settle an FDI) or become bankrupt, which may expose the Fund to a financial loss.

For more information on these and other risk factors that apply to the Fund, see the section entitled “Risk Factors” in the Prospectus.

Sustainable Disclosures

Further information in relation to the sustainability-related aspects of the Fund can be found at <https://www.ttint.com/fund-documentation/>
